Outline

01. Project Overview

02. Problem

03. Project & Features

04. Development Process

05. Key Tech

06. System Workflow

07. Methodology & System

08. Design Demonstration

07. Limitations & Future Work

08. Conclusion

Project Overview

- Mobile journaling app
- Tracks mood and emotions
- Uses AI for prompts & insights
- Includes voice recording
- Secure encrypted storage

Problem:

- People struggle with consistency in journaling
- Hard to track emotional patterns
- Lack of personalized reflection tools
- Privacy concerns with sensitive data

Project & Features (Soln)

- Create, edit, delete journal entries
- Mood tracking & charts
- AI prompts & affirmations
- Voice recording playback
- Secure encrypted storage

Development Process (SDLC)

Planning

App Idea

Design

UI & Features

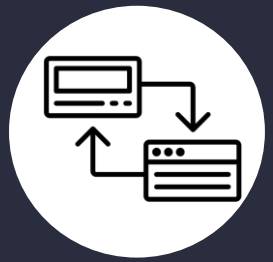
Prototype

Current Version

Key Tech

Encryption

(XOR + secure key)



API Integration

For AI features

Async Storage

For local data

Audio Recording

And playback

System Workflow

User Input

Text/audio entry

Mood

Mood selection

Storage

Secure Storage (encrypted)

AI Processing

AI analysis & prompts

Display Trends

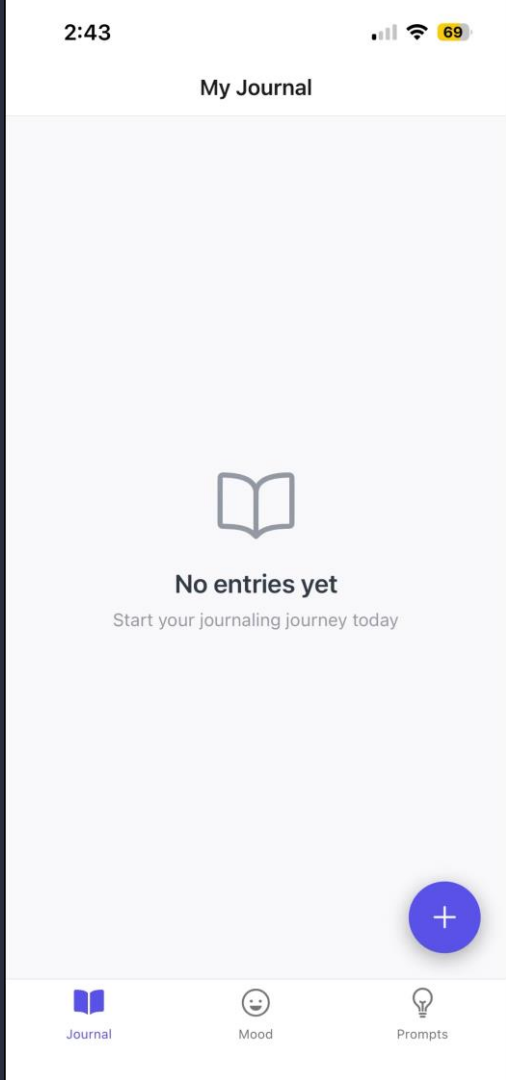
Trend visualization

Methodology & System Design

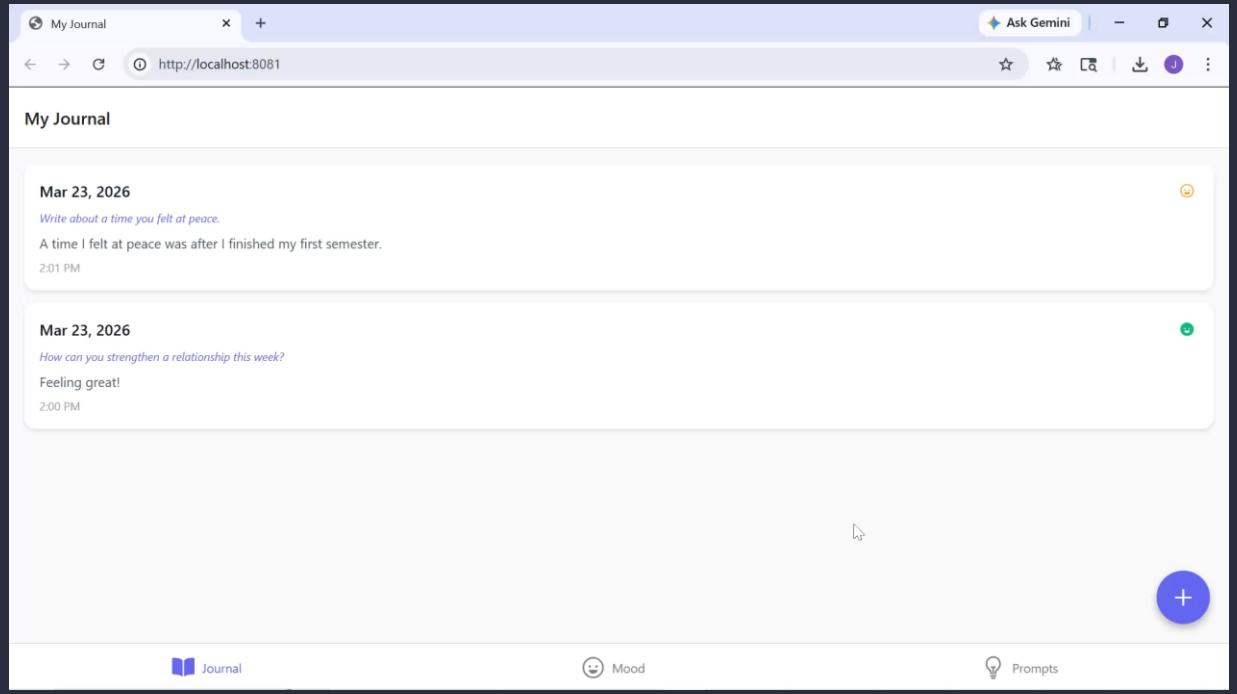
- Frontend: React Native
- StorageService → saves data
- AIService → OpenAI features
- VoiceService → audio handling
- EncryptionService → security

Demonstration

Mobile Version



Desktop Version



Limitations & Future Work

- Currently uses local storage (no cloud sync)
- Basic encryption (can be improved to AES)
- Limited AI features and customization
- Add user accounts & cloud backup
- Improve AI insights and personalization
- Enhance UI and overall user experience

Conclusion

- Developed a working AI journaling and mood tracking app
- Supports entries, mood tracking, voice notes, and AI insights
- Applied SDLC throughout development
- Implemented key features like encryption and data visualization
- Provides a strong base for future improvements
